

SBRHS Biomedical Innovation Pathway

On March 31 SBRHS students from the Biomedical Innovation Pathways classes traveled to the PC Institute for Medical Education in Fall River. There they learned and applied many new skills while using advanced medical technology equipment. Students participated in activities including:

- learning to suture;
- participating in a simulation of arthroscopic surgery;
- using high speed instruments simulating a microsurgery situation;
- learning electrical surgery techniques; and
- engaging in simulation activities on mannequins including intubation.

Thank you to Victor Machado and PC Institute for hosting and organizing this trip and experience for our students along with SBRHS Science Coordinator Matthew Talbot. Special thanks also go to the Somerset Berkley Education Foundation for their financial support.
